Note

The respective FCC ID for This document serves only as a sample manual and QIG for this sample unit. The respective FCC ID for OWL500/OWL510 will be VZ9090003, application in progress in July 2009.

Preface

The 802.11 b/g compliant **OWL500/510** is a Long Range Outdoor CPE/AP/Bridge device that can be used for dual purposes. First, it can be deployed as a traditional fixed wireless Access Point (AP). Secondly, it can be used as a Customer Premises Equipment (CPE) that connects to the outdoor wireless network of Wireless Internet Service Provider (WISP).

The metal sealed OWL500/510 is compact in size and weatherproof. Coming with a mounting kit, it can be mounted on a pole or wall. It is suitable for both indoor and outdoor usage with its 500mW output power, which is higher than a typical indoor AP (100mW).

This Quick Installation Guide (including FAQ Instruction Guide) provides instructions for getting started with OWL500/510.

Package Contents

1. OWL500/510 x 1
2. Quick Installation Guide (QIG) x 1
3. CD-ROM (with User's Manual and QIG) x 1
4. Power Sourcing Equipment (PSE) with AC cable x 1
5. Mounting Kit x 1

It is recommended to keep the original packing material for possible future shipment when repair or maintenance is required. Any returned product should be packed in its original packaging to prevent damage during delivery.

System Overview

OWL500

1	WLAN	Green LED ON indicates system ready
2	Wireless Signal Strength	For showing the signal strength situation
3	Ethernet	Green LED ON indicates connection, OFF indicates no connection, and BLINKING indicates transmitting data.
4	PoE Connector	For connecting to the Power Sourcing Equipment (PSE)
5	N-type Connector	For connecting to an antenna
6	Power	Red LED ON indicates power on, and OFF indicates power off
7, 8	Wireless Signal Strength	For showing the signal strength situation (7: Yellow; 8: Green)

OWL510

1	WLAN	Green LED ON indicates system ready
2	Wireless Signal Strength	For showing the signal strength situation
3	Ethernet	Green LED ON indicates connection, OFF indicates no connection, and BLINKING indicates transmitting data.
4	PoE Connector	For connecting to the Power Sourcing Equipment (PSE)
5	Built-in patch antenna	10 dBi (Horizontal: 110 degree; Vertical: 60 degree)
6	Power	Red LED ON indicates power on, and OFF indicates power off
7, 8	Wireless Signal Strength	For showing the signal strength situation (7: Yellow; 8: Green)

Hardware Installation

OWL500/510

The following diagram is a **basic network topology** which can be used for testing and configuring the OWL500/510.

Installation Steps:

- Step 1.** Connect an N-type antenna to the N-type connector (applicable for OWL500/510 only).
- Step 2.** Connect the PSE (POWER & DATA OUT) to the PSE 1 connector on the lower panel.
- Step 3.** Connect one end of an Ethernet cable to the PSE 2 connector on the lower panel and the other end to a computer.
- Step 4.** Connect the power cord to the PSE.
- Step 5.** Power on the PSE in order to supply power to the OWL500/510.

Getting Started

4ipnet OWL500/510 supports web-based configuration. OWL500/510 is a dual-mode system, **AP Mode** as the default mode for the first time entering the system, which also can be configured as either an access point (**AP Mode**) or a gateway (**CPE Mode**) based on your needs. It is required to follow the respective installation procedures provided to properly set up the desired mode for this system.

- Default IP Address of Web Management Interface:**

The default IP address and Subnet Mask for the AP mode and CPE mode are as follows:

Mode	AP Mode	CPE Mode
IP Address	192.168.1.1	192.168.1.1
Subnet Mask	255.255.255.0	255.255.255.0

- Default User Name and Password:**

There is only one management account for AP mode, **root**. In addition, there are two system management accounts for CPE mode to maintain the system, **root** and **admin**, and each has different levels of management capabilities. The **root** account is empowered with full privileges while the **admin** account is with partial ones.

The default user name and password for both the **root** and **admin** account are as follows:

Mode	AP Mode	CPE Mode	
Management Account	Root Account	Root Account	Admin Account
User Name	root	root	admin
Password	admin	admin	admin

<AP Mode—Default Mode>

Step 1: IP Segment Setup for Administrator PC

Set a static IP address on the same subnet mask as OWL500/510 in TCP/IP of the administrator PC, such as the following example. Do not duplicate the IP address used here with the IP address of OWL500/510 or any other devices within the same network.

>> Example of IP Segment:

The valid range of IP address is 1 ~ 254. However, **1** must be avoided as it is already used by OWL500/510. Below depicts an example of using **100** (the underlined value can be changed as desired).

IP Address: 192.168.1.100

Subnet Mask: 255.255.255.0

Step 2: Launch Web Browser

Launch a web browser to access the web management interface of AP mode by entering the default IP address, **http://192.168.1.1/**, in the URL field, and then press **Enter**.

Using an incorrect default IP address will result in no Login page shown in the web browser. Please make sure a correct IP address is used for the desired mode.

Step 3: System Login

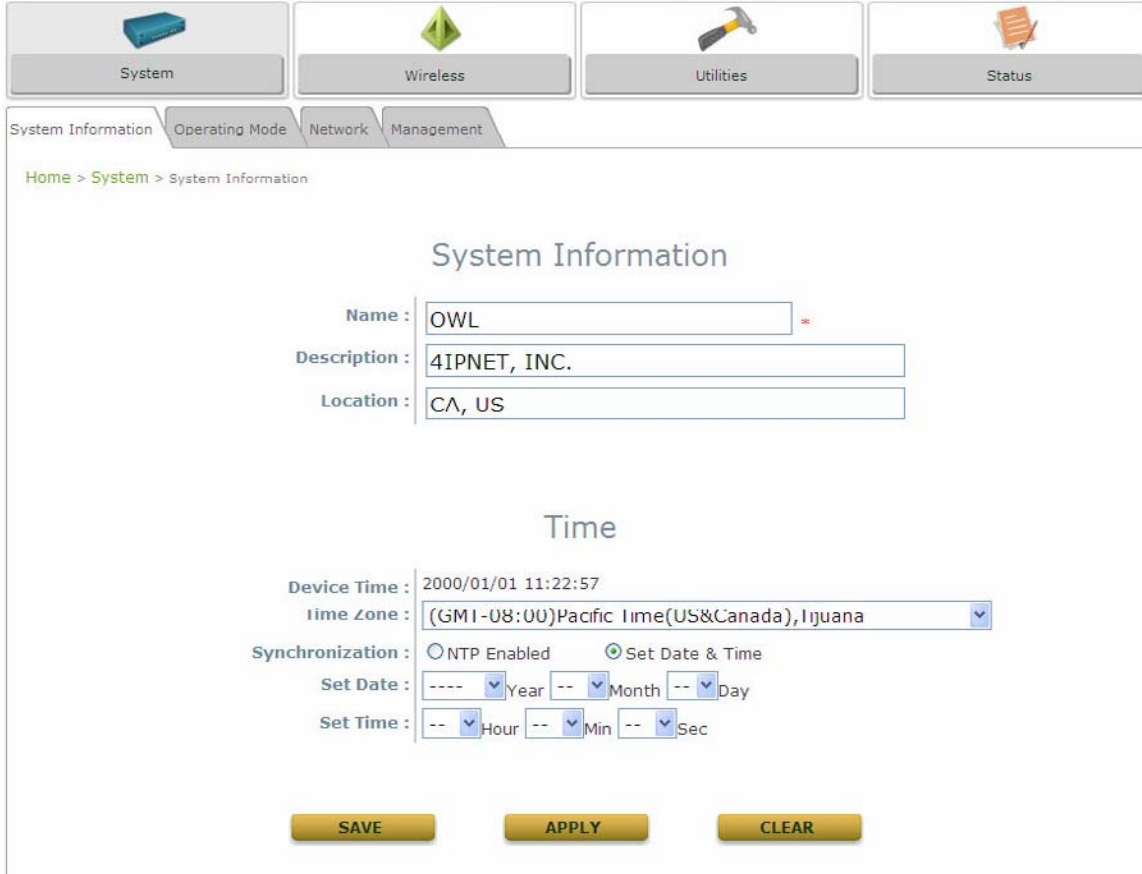

The system manager Login Page will then appear.

Enter “**root**” in the *User name* field and “**admin**” in the *Password* field, and then click **OK** to log in.

Step 4: Login Success

After a successful login to OWL500/510, a **System Overview** page of web management interface will appear, To logout, simply click on the **Logout** button at the upper right hand corner of the interface.

The screenshot displays the web management interface for the OWL500/510 device. At the top, there are four main navigation buttons: System, Wireless, Utilities, and Status. Below these, there are four sub-navigation tabs: System Information, Operating Mode, Network, and Management. The 'System Information' tab is currently selected, and the breadcrumb path 'Home > System > System Information' is shown. The main content area is titled 'System Information' and contains three input fields: 'Name' (set to 'OWL'), 'Description' (set to '4IPNET, INC.'), and 'Location' (set to 'CA, US'). Below these fields, there is a 'Time' section with the following settings: 'Device Time' (2000/01/01 11:22:57), 'Time Zone' (set to '(GMT-08:00)Pacific Time(US&Canada), Iguana'), 'Synchronization' (set to 'Set Date & Time'), 'Set Date' (set to '---- Year -- Month -- Day'), and 'Set Time' (set to '-- Hour -- Min -- Sec'). At the bottom of the form, there are three buttons: 'SAVE', 'APPLY', and 'CLEAR'.

►► Note:

By default, AP mode is enabled. Therefore, the administrator must access the system via the AP mode login page for the first time. The administrator is then able to switch between modes afterwards.

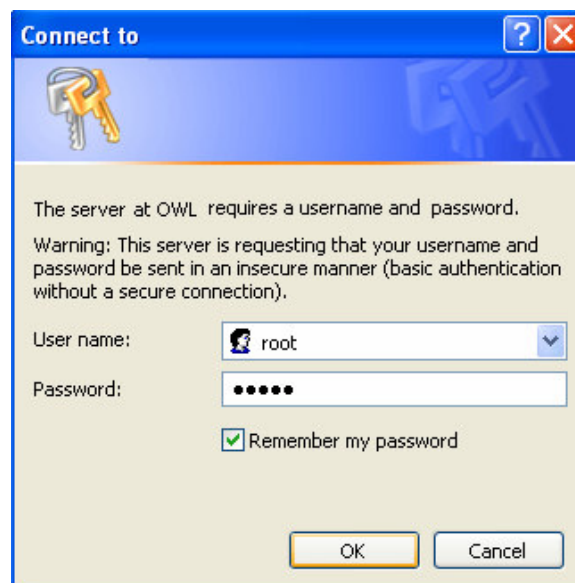

<CPE Mode>**Step 1: Launch Web Browser**

Launch a web browser to access the web management interface of CPE mode by entering the default IP address, **http://192.168.1.1/**, in the URL field, and then press **Enter**.

**Step 2: System Login**

The system manager Login Page will then appear.

Enter "**root**" in the *User name* field and "**admin**" in the *Password* field, and then click **OK** to log in. Below depicts an example of using the **root** manager account.

Step 3: Login Success

After a successful login to OWL500/510, a **System Overview** page of web management interface will appear. To logout, simply click on the **Logout** button at the upper right hand corner of the interface.

SAVE APPLY CLEAR

- Click on the **Wireless** button and then select the **Security** tab.
- Select the desired **VAP Profile and Security Type** from the drop-down list boxes. The above figure depicts an example of selecting VAP-1 and **WEP**.
- Enter the information required in the blank fields.

You must use the same information provided here to configure the network devices that are to be associated with OWL500/510.

- Click **Apply** to activate all settings configured so far.

Congratulations!

The AP mode is now successfully configured.

<CPE Mode>

【Settings here are for example only】

- Click on the **System** button and then select **Network** tab.
- Enable *Static*, and then enter the related information in the fields marked with red asterisks.
- Click **Save** to save the settings.

Step 7: LAN Configuration

- Click on the **System** button and then select the **Network** tab.
- The **LAN Configuration** section is on the same page as the **WAN Configuration** section.
- Enter the *IP Address* and *Netmask* of the LAN port.
- Click **Apply** to activate all settings configured so far.

Congratulations!

The CPE mode is now successfully configured.

After OWL500/510's network configuration completes, please remember to change the IP Address of your PC Connection Properties back to its original settings in order to ensure that your PC functions properly in its real network environments.

- ***It is strongly recommended to make a backup copy of configuration settings.***
- ***For further configuration and backup information, please refer to the User's Manual.***
