ZoneFlex™ 7055

MULTIPURPOSE DUAL BAND CONCURRENT 802.11N WIRED/WIRELESS WALL SWITCH

High Performance 2x2:2 Integrated Wired/Wireless Wall Switch

The Ruckus ZoneFlex 7055 is the industry's first dual band concurrent wired and wireless wall switch that integrates high-speed 802.11n Wi-Fi into an ultra-sleek, low-profile design that can be quickly and discretely installed in a standard wall junction box.

Ideal for offering converged services within hotel guest rooms and university dormitories, the ZoneFlex 7055 provides an easy way to offer multiple connections into a single room without multiple cables.

The ZoneFlex 7055 delivers high performance 2.4GHz and 5 GHz 802.11n wireless coverage and four wired Ethernet access connections that can be used to support a range of in-room IP device and user connectivity options. An additional pass-through port allows connectivity for digital phones that requires native access to an in-house PBX system.

An IEEE 802.3af-compliant POE port, up to 6.5 watts, powers devices such as IP telephones directly from the wall switch. The ZoneFlex 7055 requires only a single POE cable drop thereby reducing cabling, switch ports, and power sourcing equipment.
The ZoneFlex Wi-Fi Wall Switch is completely inconspicuous, minimizing the protrusion off the wall to make in-room cabling and furniture arrangement simple. Flexible deployment options allow the ZoneFlex 7055 to be easily installed via two uplink Ethernet options: an RJ-45 Ethernet jack or a 110 punch down block connection.

The ZoneFlex 7055 can be deployed as a standalone device or centrally managed by the Ruckus ZoneDirector or FlexMaster Wi-Fi system management platform.

With the ability to broadcast up to 8 SSIDs per radio, the ZoneFlex 7055 supports port-based VLANs. Authentication options include: 802.1x, MAC-based, captive portal, LDAP, RADIUS, Active Directory and through an internal user database.
